

Rodrigo Teixeira

Marketing Analytics Director & Data Engineer

rodtex.dev · github.com/strod · linkedin.com/in/strodrigo

8+ years

50+ projects

UTC-3

Full-stack marketing analytics professional with **8+ years** building end-to-end data pipelines, measurement systems, and client-facing reporting. Currently leading Data Engineering and Data Science at a US e-commerce company. Career spans major agencies (McCann Worldgroup, IPG Mediabrands), media (Rede Globo), AI startups (MINT), and international e-commerce (Filterbuy). Engineering background (Physics + Mechanical Engineering) applied to marketing measurement and optimization.

Direct Relevance to This Project

- ✓ Multi-source marketing data pipelines (10+ platforms)

✓ CRM API integration (Pipedrive, Salesforce ecosystem)

✓ Synthetic data generation (statistics background)

✓ Heatmap & funnel visualization
- ✓ Channel normalization & attribution

✓ Client-ready Looker Studio dashboards & reports

✓ Cost-per-acquisition & channel economics analysis

✓ REST API evaluation & documentation

CORE COMPETENCIES

● Data Pipelines

Python, SQL, ETL orchestration. Ingestion from APIs, CSVs, and databases. Data cleaning, normalization, deduplication at scale.

● Marketing Analytics

Multi-channel attribution, MMM (Google Meridian), cost-per-acquisition, ROAS, channel economics. GA4, GTM, server-side tracking.

● Reporting & BI

Looker Studio, QuickSight, Tableau. Client-facing dashboards, heatmaps, funnel visualizations, PDF/slide report templates.

● API Integration

Built API clients for Google Ads, DV360, TikTok, Amazon Ads, Pipedrive CRM. REST API evaluation and documentation.

● Cloud Infrastructure

GCP (BigQuery, Cloud Functions, Cloud Run, Vertex AI). AWS (Redshift, Lambda, S3, Kinesis). Serverless-first approach.

● Data Science & ML

Predictive LTV, churn prediction, RFM segmentation, forecasting (Prophet, ARIMA). MBA thesis on ML for audience generation.

HOW I BUILD MARKETING DATA PIPELINES

SELECTED PROJECTS

1

Multi-Platform Marketing Data Warehouse

Filterbuy · E-commerce · Production

End-to-end data warehouse consolidating **10+ marketing sources** (Google Ads, Meta, Amazon Ads SP/SB/SD, TikTok, GA4, Pipedrive CRM) into a unified analytics layer. Built channel name normalization, cross-platform deduplication, and attribution mapping — handling the same inconsistent labeling and missing-source challenges that real-world CallRail data presents.

2

CRM Integration & Channel Attribution Pipeline

Filterbuy · Pipedrive CRM + Ad Platforms

Built a pipeline connecting **Pipedrive CRM** (deals, activities, lead sources) with ad platform spend data to compute cost-per-lead and cost-per-deal by channel. Handles CRM records with missing or inconsistent source attribution — mapping them to known marketing channels through fuzzy matching and rule-based normalization. Reports include funnel conversion rates and channel-level ROI breakdowns.

3

Marketing Mix Model (Google Meridian)

Filterbuy · Budget Optimization

Production MMM pipeline with weekly retraining and daily inference. Ingests channel spend and conversion data from the data warehouse, estimates channel-level contribution curves, and produces **budget reallocation recommendations**. Outputs include a Visibility Score equivalent: what percentage of marketing impact is measurable vs. dark — directly analogous to the Visibility Score in this project.

Automated Reporting & Heatmap Dashboards

Filterbuy + IPG Mediabrands · Client-Facing

Built client-facing dashboards with **funnel tables**, **heatmaps (day x hour)**, **score gauges**, and **channel comparison charts** — the same visual components required for this project's report template. At IPG Mediabrands, delivered automated reporting for Nestlé across 8 LATAM markets. At Filterbuy, maintain executive dashboards with cost-per-acquisition, channel economics, and performance anomaly detection.

API CLIENTS BUILT FROM SCRATCH

5

Custom API Clients (Google Ads, DV360, TikTok, Amazon)

Open Source · github.com/strod

Built Python API clients from scratch for **Google Ads (GAQL)**, **DV360**, **TikTok Marketing API**, and **Amazon Advertising**. Each handles OAuth authentication, pagination, rate limiting, error handling, and data extraction. This experience is directly transferable to evaluating and documenting the Filevine, Litify, and SmartAdvocate APIs — I know exactly what to look for: auth methods, field availability, data model structure, and access restrictions.

First-Party Data & Server-Side GTM (LATAM)

IPG Mediabrands · Nestlé LATAM

Implemented server-side Google Tag Manager on Cloud Run across 8 markets, uncovering **30%+ conversion undercounting** from ITP and ad blockers. Connected CRM and offline data to the Google ecosystem for first-party audience activation. This Salesforce ecosystem experience is relevant to Litify (Salesforce-based) API research.

My Approach to This Project

Wk 1: Synthetic data (realistic distributions + intentional messiness) + full pipeline (ingestion, normalization, dedup, 3 outputs). **Wk 2:** Report template (gauge, heatmap, funnel, charts) + CRM API research (4 platforms) + integration testing + walkthrough. **Stack:** Python + Looker Studio + Markdown/PDF. Daily async updates.
