

RODRIGO TEIXEIRA

Analytics Engineer | BI & Data Modeling Specialist

São Paulo, Brazil | github.com/strod | rodtex.dev

PROFESSIONAL SUMMARY

Analytics Engineer with 8+ years of experience designing production dashboards, data models, and monitoring systems for ML-driven teams. Expert in Looker, LookML, DBT, SQL, and cloud data warehouses (BigQuery, Redshift, Snowflake-equivalent). Proven track record translating model performance data into actionable business insights for non-technical stakeholders. Experienced working embedded within AI/ML engineering teams, owning dashboard strategy, data transformation pipelines, and alerting logic for model degradation detection.

CORE SKILLS

BI & Dashboards	Looker, LookML, Looker Studio, QuickSight, Tableau, Power BI
Data Modeling	DBT (incremental models, materializations, DAG dependencies), dimensional modeling, fact/dimension tables, time-windowed joins
Data Warehouses	BigQuery, Redshift, PostgreSQL
SQL	Complex analytical queries, window functions, CTEs, query optimization, partitioning, clustering
Orchestration	Airflow, Matillion ETL, Fivetran, Cloud Scheduler, EventBridge
Python	Pandas, Scikit-learn, XGBoost, Prophet, boto3, ad-hoc analysis & automation
ML Monitoring	Model performance tracking, data drift detection, feature drift, concept drift, retraining triggers
Cloud	GCP (BigQuery, Cloud Functions, Cloud Run, Vertex AI, Pub/Sub), AWS (Redshift, S3, Lambda, Kinesis)
Version Control	Git, GitHub, CI/CD workflows

PROFESSIONAL EXPERIENCE

Marketing Analytics Director Filterbuy — Fort Lauderdale, FL (Remote)	Jan 2024 — Present
- Own end-to-end analytics for 10+ production ML models: churn prediction, predictive LTV, Marketing Mix Model (Google Meridian), Amazon bid optimization, and attribution models - Design and maintain Looker and QuickSight dashboards tracking model performance, translating statistical outputs into business decisions ("retrain model," "feature data issue," "budget reallocation needed") - Build and manage DBT incremental models joining predictions to actuals with time-lag offsets (e.g., LTV predictions at T joined to actual revenue at T+30, T+60, T+90) - Apply DBT materialization strategies (incremental, table, view) and manage full refreshes after schema changes across BigQuery and Redshift - Design alerting logic to flag model degradation, abnormal prediction patterns, and data quality issues - Reduced reporting latency from 24h to under 1h; cut query costs by 40% via partitioning/clustering optimization - Collaborate daily with ML engineers to define healthy performance metrics and monitoring thresholds	
Sr. Marketing Analytics Developer Filterbuy — Fort Lauderdale, FL (Remote)	Jan 2022 — Dec 2023
- Built ETL pipelines consolidating data from Amazon Ads, TikTok, Google Ads, Pipedrive CRM, and web analytics into Redshift - Designed dimensional models (fact/dimension tables) for cross-platform marketing attribution - Created BigQuery analytical modules for ROI analysis, cohort analysis, and LTV evolution tracking - Implemented enhanced ecommerce tagging and server-side event forwarding (GA4, GTM server-side, Meta CAPI)	
Head of Data, LATAM IPG Mediabrands — São Paulo, Brazil	2022 — 2023
- Led data strategy across 8 LATAM markets for Nestlé, designing first-party data ingestion and unification pipelines - Built server-side GTM infrastructure that identified 30%+ conversion undercounting on Safari (ITP/ad blockers) - Implemented Google BPI (Best Practices Implementation) across all Nestlé Google Ads accounts in LATAM	
Data Manager / Tech Lead MINT (AI Startup) — São Paulo, Brazil	2020 — 2022
- Designed AIRE: budget optimization algorithm using Linear Programming that increased ROI by 25%+ - Built Megalista: ML-based smart audience generation tool using web traffic data - Developed predictive planning algorithms based on Markowitz Portfolio Optimization for media budget allocation	

2019

2018

- 2017

Rede Globo — Rio de Janeiro, Brazil

- Automated reporting for Gshow entertainment portal (80% reduction in manual time); built churn optimization algorithm

Bridge Consulting — Rio de Janeiro, Brazil

- Built stock calculation algorithms, outlier detection systems, and automated reporting dashboards for retail clients

EDUCATION

YEAR	DEGREE	INSTITUTION
2020–2021	MBA in Data Science & Analytics	USP (Universidade de São Paulo)
2018–2019	M.Sc. Industrial Engineering (Operations Research)	COPPE-UFRJ
2010–2015	B.Sc. Mechanical Engineering	UFF
2006–2010	B.Sc. Physics	UFF

MBA Thesis: "ML Applied to Audience Generation in Digital Marketing" | **MSc Research:** "Non-Linear Programming Methods Applied to Media Mix Modeling"

LANGUAGES

English: Fluent **Portuguese:** Native **Spanish:** Intermediate

KEY PROJECTS

- **ML Model Performance Dashboards:** Looker dashboards tracking prediction accuracy, drift metrics, and retraining triggers across 10+ production models
- **Predictive LTV Pipeline:** 24-month LTV prediction using RFM + XGBoost with censored purchase data, DBT incremental models joining predictions to actuals
- **Amazon Bid Optimization Engine:** Multi-signal control system on AWS Lambda processing real-time Marketing Stream data (Kinesis → Redshift)
- **MMM Production Pipeline:** Google Meridian with weekly retraining, daily inference, model versioning, BigQuery as I/O layer
- **Data Warehouse Migration:** Led Redshift → BigQuery migration with dimensional model redesign, partitioning/clustering optimization
